

Supporting Commercial Lines Through Digital Transformation and Beyond

Commitment

Engineers dedicated to Commercial lines

Serving all tiers and all LOBs, in the US and globally

From Small Business to Large Commercial — We've designed our software to support different segments of complexity of the Commercial lines market.

Retail

Design and deliver policies that help your small-business clients protect their assets, and their futures, simply and easily.

Mid-Market

Offer flexible solutions to meet the unique needs of mid-market businesses while leaving out the pieces they don't need.

Large Commercial

Combine lines of insurance to manage the wide and varied array of risks that large businesses face.

Specialty Risk

There are as many unique risks as there are businesses to face them — make sure your product offerings and processes are set up to deliver profitably on your clients' needs.

London Market

Ensure that your global and reinsurance offerings are on pace with the needs of the London broker community.

Customers

Guidewire's first customer was a Commercial lines insurer.

We've built US and international Commercial lines capabilities into our platform from the beginning through our commitment to supporting these customers' unique requirements, and we're excited to continue to do so as the Commercial lines landscape changes.

Purpose-Built Solutions

Full Workflow Support

We provide a full-suite solution (including claims, policy, and billing) that fully enables the end-to-end insurance value chain.

Out-of-the-Box Functionality

- | | |
|--------------------------|---------------------------------------|
| Contingencies | Balanced Weighted Workloads |
| Reinsurance Management | Subrogation Tracking |
| PCM | LOB-Specific Data Model for Analytics |
| Indirect Billing | |
| Predictive Claims Triage | |

Standards Based ISO Templates *— We've invested heavily in our partnership with Verisk ISO to support ISO commercial content for the US market. Pre-built ISO templates cover all states to help dramatically jump-start new product development.

*US Only
